

KANETI VIVEK

AI/LLM Evaluation Analyst | AI Quality Assurance | Multimodal Data & Evaluation Operations

Hyderabad, Telangana, India • Open to Remote / Contract / Full-Time • +91 91824 19070 • vivekkaneti2@gmail.com
linkedin.com/in/kanetivivek • vivek-kaneti-nine-ruddy.vercel.app

PROFESSIONAL SUMMARY

AI/LLM Evaluation professional with hands-on experience evaluating LLM-powered, multimodal, conversational, and AI-agent workflows in production environments. Skilled in assessing AI responses for task completion, factuality, instruction following, reasoning quality, relevance, safety, and hallucinations using structured rubrics. Experienced in A/B preference ranking, Likert/ELO-style evaluation, PRP/IRP-based assessment, multimodal annotation, grounding, GUI-agent evaluation, live speech-to-speech evaluation, transcription review, and evidence-based error identification across text, image, video, audio, and agentic/GUI scenarios.

CORE SKILLS

LLM & Agent Evaluation: Response Evaluation, Agentic AI/Agent Evaluation, Task Completion, Tool/Action Outcome Assessment, Multi-Turn Conversation, Instruction Following, Factuality & Hallucination Detection, Reasoning Quality, Relevance & Completeness, Safety & Policy Evaluation

Multimodal & Agent Data: Image/Video Annotation & QA, Text & Audio Evaluation, Speech-to-Speech Evaluation, Transcription Accuracy, Visual Grounding, Reference Expression Evaluation, GUI/Computer-Use Agent Evaluation, Bounding Box & Object-Level Annotation

Evaluation Methodologies: A/B Preference Ranking, Pairwise Comparison, Likert Scale, ELO-Based Ranking, PRP/IRP Evaluation, Rubric-Based Evaluation, SFT Data Review, Error Taxonomy & Root-Cause ID, Rater Consistency / QC

Tools & Technical Exposure: CVAT, Multimodal Annotation Platforms, AI Evaluation Platforms, GitHub, Vercel, Prompt Engineering, Evaluation Dataset Design, Basic Python for AI Evaluation & Data Tasks

PROFESSIONAL EXPERIENCE

AI/LLM Evaluation Analyst / AI Data & Quality Specialist — Innodata

June 2026 – August 2026 · Remote

LLM / Response Evaluation Agent / Multimodal Evaluation

- Evaluated LLM-generated responses against structured quality criteria — factuality, instruction following, reasoning, relevance, fluency, safety, and hallucination risk.
- Performed A/B, pairwise, and PRP-based preference evaluations to rank relative response quality using predefined rubrics for model improvement and training-data workflows.
- Conducted GUI-agent / computer-use evaluation, assessing whether AI systems correctly interpreted visual environments and completed expected actions and tasks.
- Reviewed visual grounding and reference-expression tasks, verifying model outputs correctly corresponded to intended visual entities or regions.
- Performed live speech-to-speech evaluation, assessing conversational quality and transcription accuracy; conducted annotation and QC using CVAT — bounding boxes, grounding, object-level annotation, and multimodal review.
- Documented evidence-based rating decisions, escalated ambiguous cases, and maintained rating consistency to reduce evaluator disagreement.

Key AI/LLM Evaluation Projects

- Agentic & GUI Interaction Evaluation** — Evaluated AI agents operating within visual interfaces; reviewed grounding, target selection, action accuracy, and task completion, identifying failures in visual reference and task interpretation.
- Live Speech-to-Speech Evaluation** — Evaluated AI-generated spoken responses in live conversational scenarios; assessed response quality, relevance, and transcription accuracy using preference/ELO-style scoring.
- Multimodal Evaluation & Grounding** — Reviewed image, video, text, and multimodal AI outputs; evaluated visual grounding against source content and performed annotation QA to identify labeling inconsistencies.
- LLM Preference & Quality Evaluation** — Compared alternative model responses using structured rubrics across factuality, reasoning, relevance, and safety, documenting concise evidence for preference decisions at scale.

AI EVALUATION PORTFOLIO

vivek-kaneti-nine-ruddy.vercel.app — demonstrates LLM response evaluation, hallucination detection, multimodal AI evaluation, AI quality assurance, preference ranking, grounding evaluation, AI-agent evaluation concepts, and evaluation rubrics/quality criteria.

EDUCATION & ADDITIONAL TRAINING

B.Tech — Electronics & Communication Engineering
Aditya Engineering College, JNTU Kakinada · 2022

Languages: Telugu (Native/Proficient), English (Professional)

Additional Training:
Generative AI & LLM Evaluation, RLHF / SFT Data Review, AI Safety & Policy Evaluation, Evaluation Rubrics & Benchmarking, Conversational AI Quality Assessment
